

UniSysCat at the Berlin Science Week 2020

Start Time: Sunday, October 25, 2020

End Time:

A large red square containing the text "BERLIN SCIENCE WEEK" in white, bold, sans-serif capital letters, stacked vertically.

UniSysCat at the Berlin Science Week 2020

When: 3rd November 2020, 2-5pm

Where: Online (Zoom). Please register [here](#).

From Greenhouse gas to fuel? Revolutionary catalysis? Join us during Berlin Science Week, meet our researchers and find out what we do at the UniSysCat Cluster of Excellence – and how our research contributes to the development of green and sustainable chemistry.

In a live demonstration of experiments, Prof Arne Thomas will showcase how exciting catalysis research is and which areas are currently being explored.

Dr. Silke Leimkühler, University of Potsdam, and Dr. Beatriz Roldán Cuenya, Fritz Haber Institute, follow up with a discussion of their work on developing methods to produce energy from CO₂.

The revolutionary research taking place at UniSysCat will further be presented by junior researchers Franziska Hess, Marius Horch and Tobias Gensch. Four female professors will then

share their experiences and discuss the opportunities and barriers they faced on their career journey.

The program will conclude with a brief Science Party: meet the speakers and the staff of the UniSysCat office at TU Berlin.
